## GRIIDC Genetic Data Guidance Table

|  | Existing National Data Archive |  |  |  |  |  | Files to submit to GRIIDC |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Genetic <br> Data Type | Raw reads NCBI SRA** | NCBI <br> GenBank | NCBIGEO | Tree BASE | NCBI <br> Popset | MG- <br> Rast | Assembled contigs*** | Assembled scaffolds*** | Annotated assembly of FASTA files*** | Raw <br> sequence <br> data | File with sample info* | Other files |
| genome assemblies and annotations | x |  |  |  |  |  | X | x | x | x | x |  |
| transcriptome assemblies and annotations | x |  |  |  |  |  | X |  | X |  | x |  |
| gene expression | x |  | x |  |  |  | x | x | x |  | X |  |
| methylation | x |  | x |  |  |  | x | x | x |  | x |  |
| SNP | x |  |  |  |  |  |  |  |  |  | x | matrix of SNPs |
| microsatellite |  |  |  |  |  |  |  |  |  |  | x | matrix of microsat scores |
| comet assay |  |  |  |  |  |  |  |  |  |  | x | images showing results |
| microarray |  |  |  |  |  |  |  |  |  |  | x |  |
| quantitative PCR |  |  |  |  |  |  |  |  |  |  | x | data/curve for calculating concentration |
| metagenomics | x |  |  |  |  | x |  |  |  |  | x |  |
| sanger sequences |  | x |  |  |  |  |  |  |  |  | X |  |
| terminal restriction fragments (RFLP) |  |  |  |  |  |  |  |  |  |  | X | matrix of how fragments were scored |
| aligned sequences (evolution/ population genetics) |  |  |  | X | x |  |  |  |  |  | X | nexus or aligned fasta |
| microbial ribosomal sequence data | X | X |  |  |  |  |  |  |  |  | x |  |

* All data should have sample information - generally this is a table with sample IDs and accession numbers AND either 1) if samples are collected in the field: latitude, longitude, depth, date collected, and other environmental data collected; OR 2) if data are derived from laboratory experiments exposing organisms to different treatments in the lab include treatment data.
** SRA data should have a reference to the home page of the data in the Supplemental Information section of Dataset Submission.
*** PI may not have always annotated the assembly or created scaffold but if they do they should submit these to GRIIDC.
Note: NCBI has a Transcriptome Shotgun Assembly (TSA) Database; this is not user-friendly for all organisms. Pls should deposit assemblies either with GRIIDC or TSA, or they may do both.
